1. Project Overview

1.1 Project Background

In today's global political and economic environment, wars and conflicts have profoundly impacted the lives of countless civilians. Despite rapid technological advancements and swift information dissemination, the destructive power of war remains deeply entrenched, affecting millions worldwide. From innocent lives lost to extensive economic damage, war not only destroys cities and infrastructure but also tears apart social fabric, impacting millions of families.

The call for peace has grown louder, particularly among the younger generation, who not only demand peace but want to take tangible actions to achieve this goal. PCE (Peace Coin) emerged to meet this demand. As a cryptocurrency project focused on the global anti-war movement, PCE aims to leverage blockchain technology and the characteristics of cryptocurrency to enable every individual who wants to promote peace to participate in anti-war efforts and spread the global message of peace.

The creation of PCE token is driven by the desire to use the decentralized nature of blockchain technology to provide an economic platform for global anti-war advocates, allowing them not only to contribute to the cause of global peace but also to gain tangible economic returns from their participation. The issuance of PCE is not merely about creating another cryptocurrency; it is about providing a new catalyst for the global anti-war movement by breaking through traditional financial constraints and advancing anti-war actions.

1.2 Project Goals

The ultimate goal of the PCE project is to become a core pillar of the global anti-war and peace movements, tightly integrating anti-war actions with economic incentives through the power of cryptocurrency. Our specific objectives are as follows:

Promote Global Anti-War Action: Through the widespread circulation of PCE tokens, we aim to raise global awareness about the need for peace. Through the decentralized blockchain system, every token holder can become part of the global anti-war movement and contribute to the cause of peace.

Provide Economic Incentives for Anti-War Advocates: PCE is not just an anti-war token; it is a full-fledged economic platform. Through USDT staking and the PEPE mining pool reward mechanism, advocates can participate in the global peace movement and also gain substantial economic returns. This will incentivize more people to join the anti-war cause, transforming it into a concrete economic action rather than just a slogan.

Establish a Long-Term Sustainable Community Economy: Through smart contracts, mining pool rewards, and token appreciation mechanisms, PCE tokens will ensure long-term, stable growth. Using a decentralized reward system, we will ensure that the value of the token and community participation remain stable and sustainable, providing continuous support for the global anti-war movement.

1.3 Project Origin

PCE was born out of a profound recognition of the far-reaching negative impacts of war. As a cryptocurrency issuer, we realized that traditional anti-war methods often lack sufficient financial backing and global mobilization power. The rise of digital currencies and blockchain technology presents an unprecedented opportunity to provide a borderless, decentralized support platform for the global anti-war movement.

PCE's original intention is not only to create an anti-war token but to provide a new and innovative way for people to engage in anti-war actions while also benefiting financially. We believe that cryptocurrency can empower the anti-war movement by offering economic incentives while fostering the spread of peace on a global scale.

2. Token Economics

2.1 Total Supply

- **Total Supply:** 100 million PCE tokens (100,000,000 PCE)

2.2 Token Distribution

Category	Percentage	Amount (PCE)	Description
PEPE Mining Pool Rewards	50%	50,000,000	Users earn rewards by staking USDT in the PEPE mining pool. Rewards are distributed dynamically based on stake amount, duration, and total pool size.
Free Mining Pool Rewards	20%	20,000,000	Provides additional liquidity and rewards for participating in other mining pool activities, incentivizing pool participants.
Team & Strategic Partnerships	20%	20,000,000	Team tokens will be locked for at least 1 year to ensure project stability and will be used for partner rewards.
Airdrops & Community Rewards	10%	10,000,000	Attracts users and promoters to join the PCE community through airdrop activities and community engagement.

2.3 Reward Mechanism

PEPE Mining Pool Reward Mechanism (USDT Staking):

- Users earn PCE rewards by staking USDT in the PEPE mining pool, with rewards distributed dynamically based on staking amount and duration.
- **Bonus Rewards:** Longer staking periods will receive bonus rewards. For example, 10% more for a 3-month stake and 15% for a 6-month or longer stake.

Free Mining Pool Reward Mechanism:

- Users providing liquidity (e.g., staking USDT with PCE for trading) in the PEPE mining pool will receive corresponding rewards.

Airdrop & Community Rewards Mechanism:

- Regular airdrop events on platforms like Twitter, Telegram, and others will increase PCE's visibility and expand the community.
- Social media interactions such as retweets, comments, and likes will allow users to earn PCE rewards, further boosting the community base.

3. Technical Architecture

3.1 Blockchain Platform Selection

PCE tokens will be issued on **Binance Smart Chain (BSC)** for the following reasons:

- **Low Transaction Fees:** BSC offers low fees, ensuring cost-efficient transactions.
- **Scalability and Stability:** BSC can support a large user base and high-frequency transactions, making it ideal for global scale.
- **Compatibility:** BSC supports Ethereum-compatible smart contracts, ensuring that PCE tokens can be integrated with popular wallets and exchanges.

3.2 Smart Contract Development

PCE's smart contracts will be developed based on the **BEP-20 standard** to ensure compatibility with Ethereum-based systems and ease of integration into decentralized exchanges and wallets.

- **Token Issuance and Management:** The smart contracts will handle the PCE token's supply, transfers, and transaction records.
- **Staking & Reward Distribution:** Rewards are allocated based on the amount of USDT staked in the PEPE mining pool and the staking duration.
- **Liquidity Mining:** The smart contracts will support liquidity mining by staking PCE with USDT and other assets.
- **Locking Mechanism:** Ensures that team tokens are gradually released after a lock-up period.

3.3 Security & Auditing

To ensure the safety of our users, PCE will undergo independent third-party security audits to check for vulnerabilities in the smart contracts. The contract code will be open to the community for transparency and review.

4. Market Analysis

4.1 Global Anti-War Movement & Cryptocurrency Market

As global tensions rise, anti-war has become a common appeal among people worldwide. At the same time, the cryptocurrency market continues to grow, surpassing a market cap of **\$2 trillion** in 2023. More and more individuals are choosing cryptocurrency as a method of preserving and growing wealth.

PCE capitalizes on these trends, combining the anti-war movement with cryptocurrency's economic incentives, offering a platform where global anti-war advocates can participate and receive rewards via staking and mining.

4.2 Market Promotion Strategy

To expand PCE's influence, we will employ a multi-faceted strategy, including:

Social Media Outreach: We will increase exposure by publishing PCE-related content on Twitter, Telegram, Reddit, and other platforms.

Partner Promotion: We will collaborate with platforms like Tether (USDT) and PEPE Mining Pool, leveraging their user bases and market traffic.

Online and Offline Events: We will host live streaming events and offline peace-themed events, inviting community leaders and influencers to promote the project.

5. Partners

5.1 Tether (USDT)

PCE has formed a strategic partnership with Tether (USDT), a leading stablecoin. This partnership will enable stable and secure staking opportunities for users, ensuring the stability of the PCE project.

5.2 PEPE Mining Pool

PEPE Mining Pool is a core partner in providing mining pool rewards. By staking USDT, users will receive PCE tokens, further promoting token circulation and market recognition.

5.3 Additional Partnerships

We are also seeking more partnerships with:

Decentralized Exchanges (DEX): To increase liquidity and trading volume.

Payment Platforms: We aim to explore integrating PCE as a payment method.

Blockchain Tech Firms: Collaborating with blockchain companies to enhance PCE's infrastructure.

6. Legal Disclaimer & Compliance

6.1 Risk Warning

Market Volatility: Cryptocurrency markets are highly volatile. Investors should participate cautiously.

Legal Compliance: We will comply with the legal regulations of various countries to ensure PCE's legality.

6.2 Compliance Statement

PCE will stay in close communication with regulatory authorities worldwide to ensure compliance and adjust strategies accordingly.

7. Future Plans & Value Breakthrough

In the future, PCE will expand its market through partnerships with more financial platforms, adding more practical use cases for PCE. We will also explore DeFi ecosystem collaborations to increase the value of PCE and become a global bridge for both anti-war principles and economic incentives.

8. Global Cooperation & Influence

To achieve the global anti-war goal, PCE will strengthen its partnerships with global anti-war organizations, social enterprises, and UN to expand its global influence. Through multi-faceted cooperation, we will create a global network, driving further adoption of PCE.

Partnerships with Global Anti-War Organizations: PCE plans to collaborate with well-known anti-war organizations to push for global anti-war actions and provide economic support to these organizations.

Social Responsibility Projects: PCE will drive social responsibility projects, especially in post-war recovery, disaster relief, and mental health aid for war-affected communities.

9. Technological Innovation & Development

PCE is not just a cryptocurrency based on blockchain technology; it will continue to innovate, advancing blockchain and cryptocurrency technology.

Smart Contract Innovation: PCE will continuously optimize its smart contracts to ensure greater security, transparency, and scalability. In the future, PCE's smart contracts will support more complex business scenarios and integrate with other blockchain platforms.

Decentralized Applications (DApps): PCE will evolve into a decentralized application platform, allowing users and developers to create and run decentralized applications (DApps) within its ecosystem, increasing the token's practical value.

Collaborations with Leading Blockchain Tech Firms: PCE will collaborate with leading blockchain companies to push forward technological innovation in the blockchain field, improving the platform's security and efficiency.

10. Conclusion & Future Vision

PCE is not just a cryptocurrency; it is a driving force for the global anti-war movement. By leveraging blockchain technology, smart contracts, and mining rewards, PCE will provide economic returns to anti-war advocates and help advance the global peace movement.

In the future, we believe PCE will break through economic, technological, and social limitations, becoming the core pillar of the global anti-war movement and driving the peace process to new heights. Specifically, we expect:

Political: PCE will become a driving force in the global anti-war and peace movements, drawing in governments, international organizations, and social activists to work together. As
